

Practical 5 :Printing date in user given format by html & javascript

```
<!DOCTYPE html>
<html>
    <head>
        <title>Page Title</title>
        <script>

            function dmy1()
            {
                var d1=new Date;
                document.write(d1.getDate());
                document.write("-");
                document.write(d1.getMonth()+1);
                document.write("-");
                document.write(d1.getFullYear());
                document.write("</br>")
            }
            function dmy2()
            {
                var d1=new Date;
                document.write(d1.getMonth()+1);
                document.write("-");
                document.write(d1.getDate());
                document.write("-");
                document.write(d1.getFullYear());
                document.write("</br>")
            }
            function dmy3()
            {
                var d1=new Date;
                document.write(d1.getFullYear());
                document.write("-");
                document.write(d1.getDate());
                document.write("-");
                document.write(d1.getMonth()+1);
                document.write("</br>")
            }
            function dmy4()
            {
                var d1=new Date;
                document.write(d1.getFullYear());
                document.write("-");
                document.write(d1.getMonth()+1);
```

```

        document.write("-");
        document.write(d1.getDate());
        document.write("</br>")

    }
</script>
</head>
