

practical 6.a : write js to get detail from visitors browser

```
<html>
<script>
function f()
{
var x="Browser CodeName: " + navigator.appCodeName + "<br>" ;
var y="browser name : " + navigator.appName + "<br>";
var z="browser version : " + navigator.appVersion + "<br>";
var i="browser language : " + navigator.appLanguage + "<br>";
var j="is browser online ? (yes or not) : " + navigator.onLine + "<br>";
var k = "Cookies Enabled: " + navigator.cookieEnabled + "<br>";
var a="geolocation : " + navigator.geolocation + "<br>";
var b="platform: " + navigator.platform + "<br>";
var c = "Browser's Engine Name: " + navigator.product + "<br>";
document.getElementById("p").innerHTML=x+y+z+i+j+k+a+b+c;
}
</script>
<body>
<input type="button" value="click here to get browser detail"
onclick="f()">
<p id="p"></p>
</body>
</html>
```
