practical 6.b: write js to create the button a new window should open up

```html
<html>
<head>
<script>
var myWindow;
function openWin()
{
  myWindow = window.open("n.html");
}
function show()
{
document.write('<input type="button" value="click here to get
browser detail in new window" onclick="openWin()">');
}
</script>
</head>
<body onload="show()">
</body>
</html>
```
